

PROJECT REPORT / SERVICE DETAILS

PROJECT REPORT / SERVICE DETAILS

1. Project Information

- **Project Name:** DEEP SEA ELECTRONIC CONTROLLER CONFIGURATION
- **Location:** thane
- **Client Name (if applicable):** puranik
- **Project Start Date:** --
- **Project Completion Date:** -
- **Status:** Completed

2. Company Information

- **Company Name:** Omkar Rewinding Services
- **Specialization:** Repair, Rewinding & AMC Services for Generators & Industrial Motors
- **Dealer:** Spare Parts for Generators & Motors
- **Customer Support:** 12/7 Service Availability

3. Scope of Work

- **Services Provided:**
 - Panel controller configuration

4. Technical Details (if applicable)

- **Machine Type:** cummins
- **Capacity / Power Rating:** 500kva
- **Materials Used:** [Deep Sea DSE7320 Generator Control Panel](#) | [ADE Power](#)

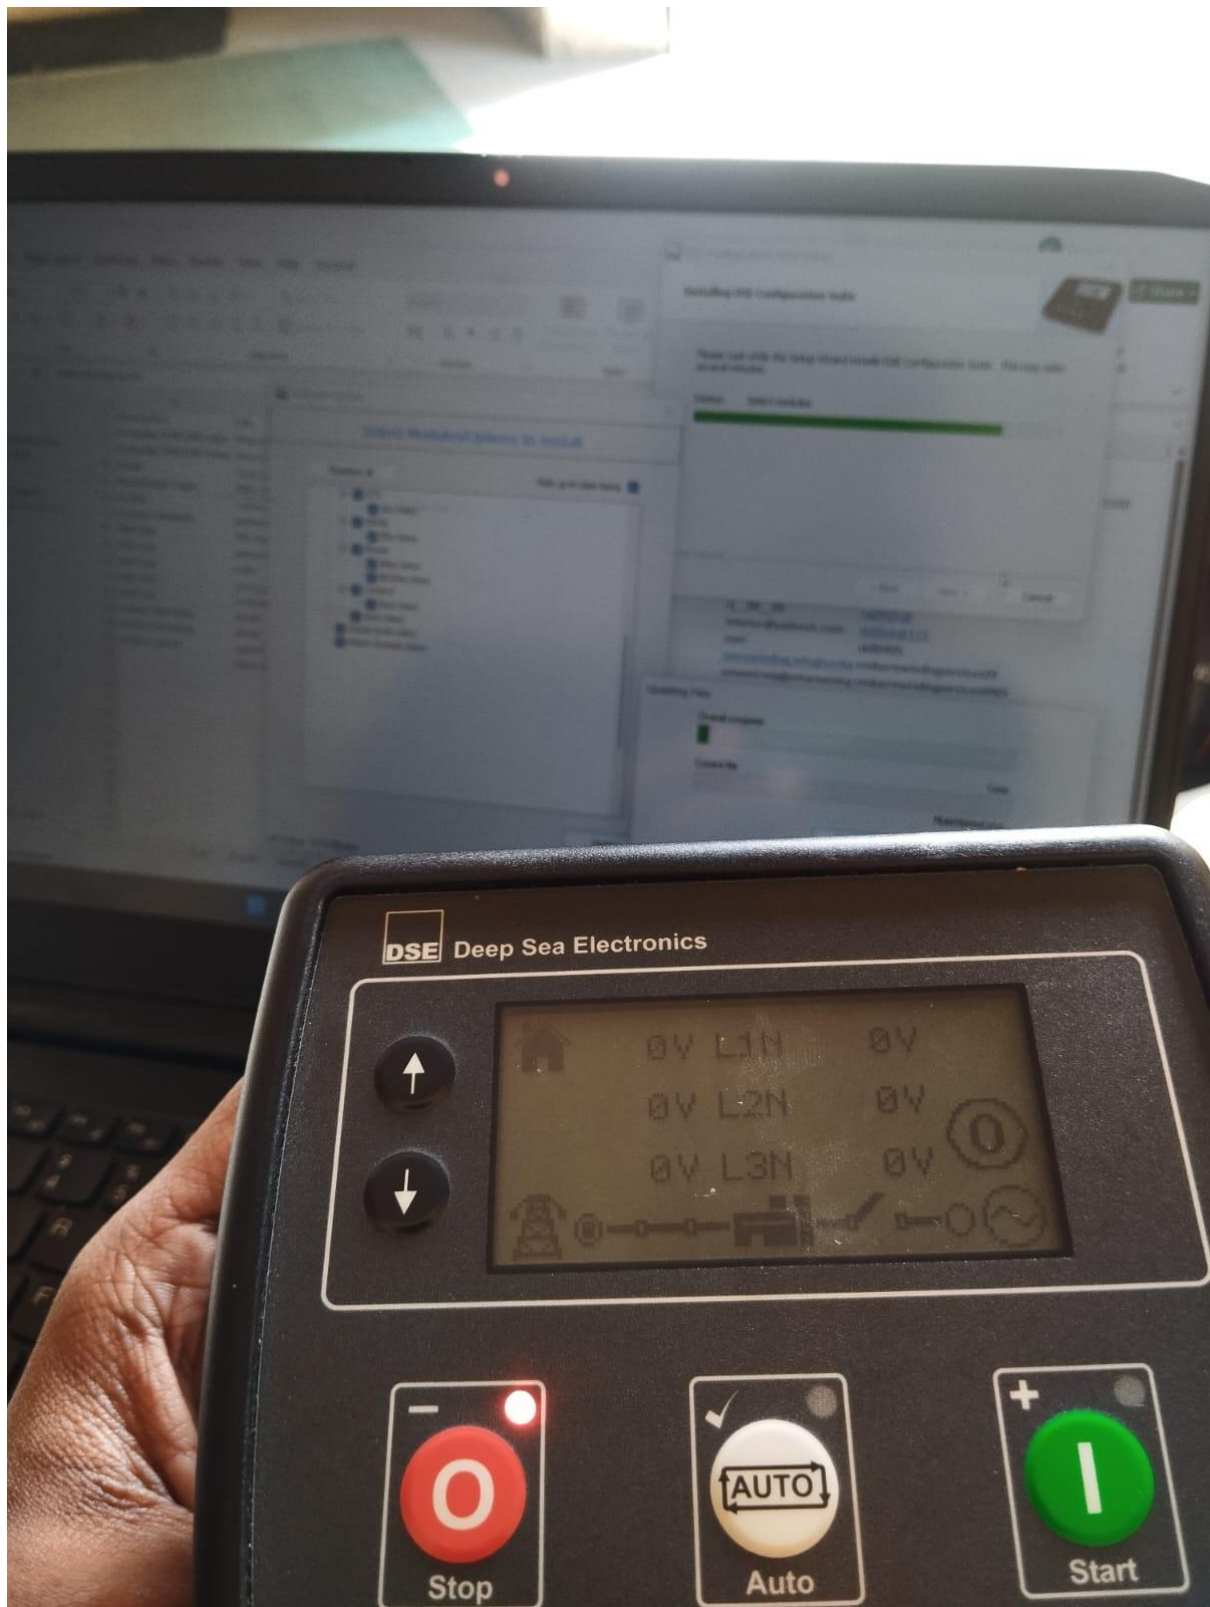

5. description

For our valued client, we successfully carried out the **Deep Sea Electronic Controller Configuration** to upgrade and optimize the DG set's performance. The process began with **opening the old connections and carefully removing the existing controller**. Once the old system was dismantled, we **installed the new Deep Sea Electronic Controller**, ensuring proper fitting and secure wiring connections.

Using **Deep Sea Software**, we configured the controller to match the specific operational requirements of the DG set. We also set up both **Auto and Manual modes**, providing flexible control options. In **Manual mode**, we individually configured all essential sensors, including **oil pressure, temperature, battery voltage, and starter controls**, ensuring accurate readings and seamless functionality.

After completing the installation and configuration, we performed a **comprehensive testing and calibration process** to verify the controller's efficiency. This upgrade ensures **better automation, enhanced monitoring, and improved reliability** for the DG set, guaranteeing smooth operations for the client.
